JOHN WATSON

and

WAYNE STANLEY

With over a century of experience, Watson Gloves is North America's single source for hand protection at work, at home, at play. Our team of glove specialists gets tremendous satisfaction from working with our customers to find the perfect hand protection for just about any task imaginable. We are committed to innovation through protecting people and our planet with a robust sustainable glove portfolio. Whether we source our gloves from the world's finest manufacturers, or hand-craft them in our local factory, every pair of gloves we sell has been selected for top-of-the-line materials, design and craftsmanship. Try on a pair of Watson gloves. Your hands will thank you!

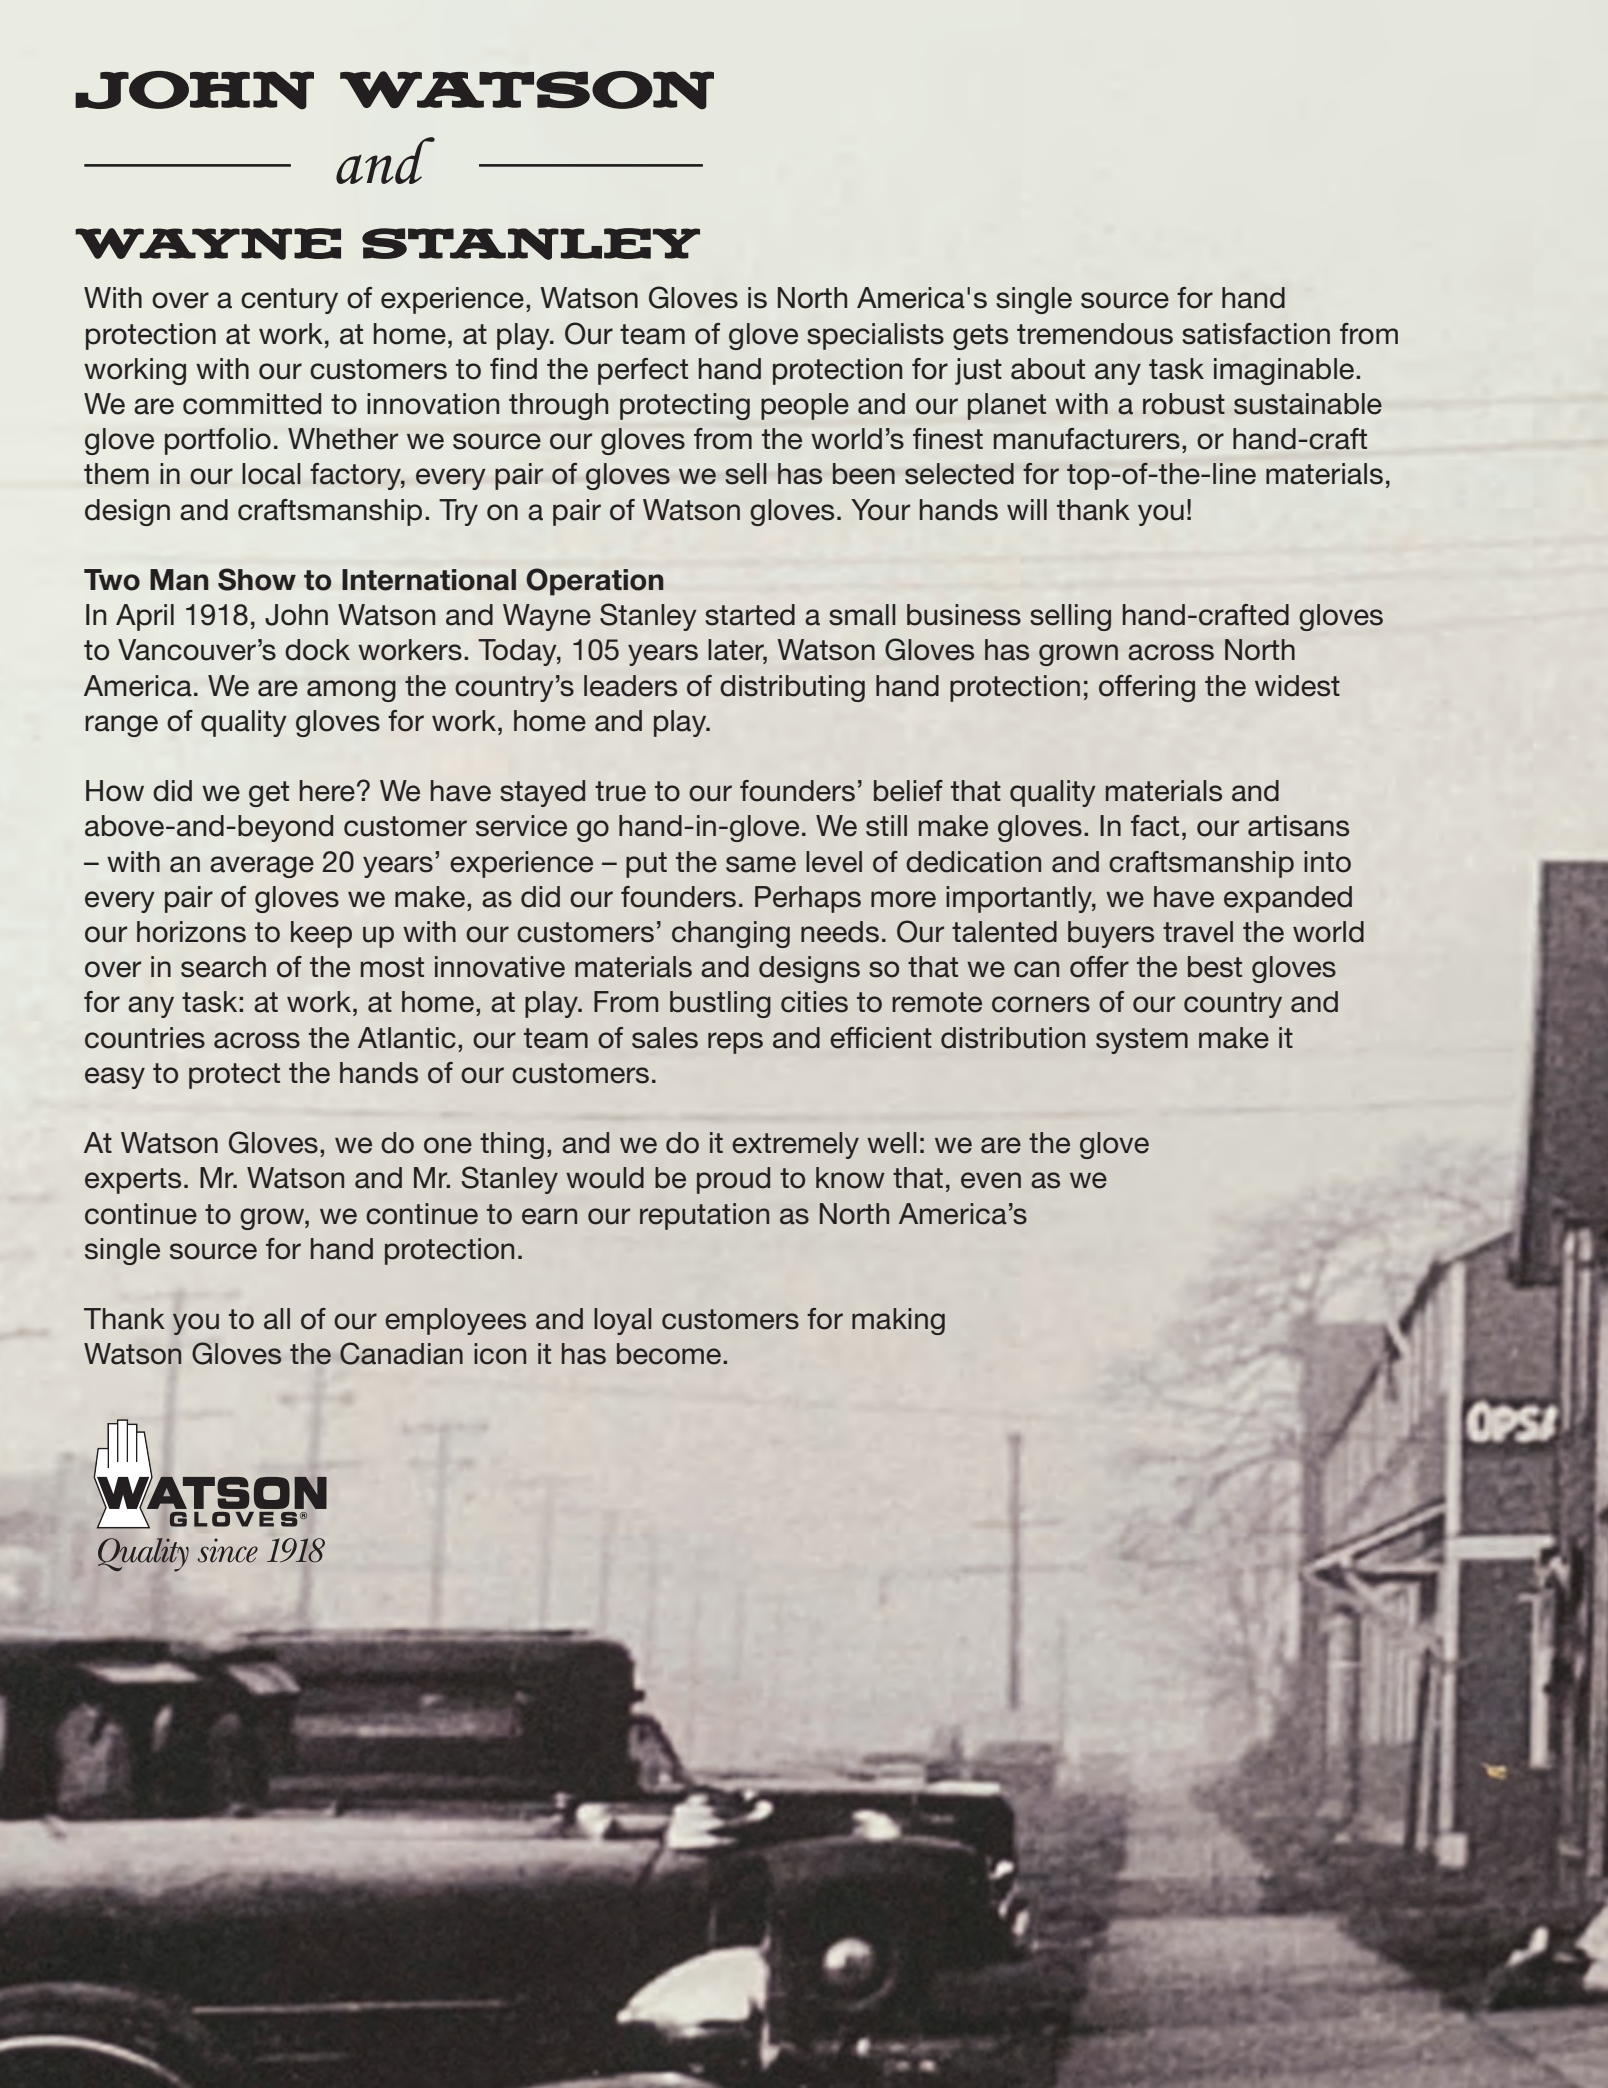

Two Man Show to International Operation

In April 1918, John Watson and Wayne Stanley started a small business selling hand-crafted gloves to Vancouver's dock workers. Today, 105 years later, Watson Gloves has grown across North America. We are among the country's leaders of distributing hand protection; offering the widest range of quality gloves for work, home and play.

How did we get here? We have stayed true to our founders' belief that quality materials and above-and-beyond customer service go hand-in-glove. We still make gloves. In fact, our artisans – with an average 20 years' experience – put the same level of dedication and craftsmanship into every pair of gloves we make, as did our founders. Perhaps more importantly, we have expanded our horizons to keep up with our customers' changing needs. Our talented buyers travel the world over in search of the most innovative materials and designs so that we can offer the best gloves for any task: at work, at home, at play. From bustling cities to remote corners of our country and countries across the Atlantic, our team of sales reps and efficient distribution system make it easy to protect the hands of our customers.

At Watson Gloves, we do one thing, and we do it extremely well: we are the glove experts. Mr. Watson and Mr. Stanley would be proud to know that, even as we continue to grow, we continue to earn our reputation as North America's single source for hand protection.

Thank you to all of our employees and loyal customers for making Watson Gloves the Canadian icon it has become.

QUALITY GLOVES

GLOVE BRANDS

ECO-CONSCIOUS

Homegrown™ is an environmentally sustainable line of gardening gloves, which uses our new WasteNot™ yarn in a variety of ways. WasteNot™ yarn is made from 100% RPET. Some styles, such as our new 204 Sparrow, feature a spandex back that is made up of 96% recycled WasteNot™ yarn, while others, such as the 375 Karma, is made up of 25% (+/- 2%) recycled WasteNot™ yarn – that's equal to one whole recycled water bottle (500ml) used to make one pair of these gloves! Our new Homegrown™ brand is perfect for hard working gardeners that make informed choices about the products they buy and their environmental impact.

HIGH PERFORMANCE

Work Armour is our brand of performance gloves available in a number of styles for both Winter and all season. Features include hard-wearing microfibre and goatskin palm styles for general purpose and styles with impact protection for heavy duty applications. Snug-fitting and designed with a rugged look, our Work Armour gloves are perfect for both work and play.

CHEMICAL RESISTANT

We've got you covered with our 360° Total Coverage and Liquid Courage line. 360° Total coverage is ideal for the janitorial and the food industry and most of our products are CFIA approved. Our buyers source globally to ensure our 360° products are of the highest quality at the best value.

WELDING

Rock on with Watson's latest welding glove collection – Heavy Metal. Whether you're looking for welding gloves with heat protection, cut resistance, or a performance fit, these gloves will allow you to keep on rockin' no matter the work you do.

Heat Wave is our brand of welding gloves for all of your fabricating, Stick, Tig & Mig welding needs. Our gloves come in variety of fits, styles and gauntlet lengths and are available in both full grain and split leather for excellent protection. There are also lined styles to keep your hands warm while welding in the cold. Heat Wave is the trusted brand in the welding industry.

POWERLINE

UTILITY

Introducing Powerline™, the revolutionary new brand designed specifically for the utilities industry. Crafted with hard-wearing water resistant cowhide leather and reinforcement patches in all the right areas. Offering superior dexterity and durability, Powerline™ gloves are the next level of hand protection in the utilities sector.

STEALTH

COATED

The Stealth brand of seamless knit gloves offers a second skin fit for maximum dexterity. Our gloves come in a variety of liners and dips including polyurethane, nitrile and latex. Also in the Stealth brand is a range of cut resistant gloves with varying degrees of cut protection for all your extra hand protection needs. If you're looking for work gloves with high dexterity, excellent grip, and comfort, then Stealth is the brand for you.

Grease Monkey®
Green Monkey™

DISPOSABLE

Our Grease Monkey brand of disposable gloves has evolved! Not only do we have our 'OG'S' (Original Grease Monkey's, 5553PF, 5554PF, and 5555PF) we also have the evolution of our Grease Monkey Brand and offer biodegradable disposable called Green Monkey™ gloves which degrades in 10 years in landfill conditions. No matter what industry you are in, our Grease Monkey™ and Green Monkey™ gloves will help you get the job done.

**SHOCK
TROOPER**

OIL AND GAS

Our Shock Troopers featuring heavy duty Dryhide™ goatskin leather that is oil resistant protecting your hands when working in greasy conditions. They also feature D30®iA additive that provides shock and impact protection. For every pair of Shock Trooper gloves we sell we donate partial proceeds to the Wounded Warriors Canada.

**STORM
TROOPER**

CANADIAN MADE

We have been proudly making gloves in our Canadian factory since 1918. Located at our Head Office in Burnaby, BC, the factory produces over 30 styles ranging from traditional leather drivers to our best selling industrial glove, the Storm Trooper. The Storm Trooper series is the original leather hybrid glove which features the perfect mix of a hard wearing leather glove with FR impact protection components.

GRIDLOCK
LOCKS OUT HAZARDS

NEEDLESTICK/PUNCTURE

Gridlock with Alycore is the next level of needlestick, cut and puncture resistance. For industries where workers are exposed to hazards such as hypodermic needles, nails, wire, glass fragments, metal shards, or wood fragments, we have the hand protection solution for them. By using a layer based technology, Gridlock with Alycore™ provides the highest level of cut, puncture and needle resistance while maintaining incredible dexterity.

INNOVATIVE MATERIALS

RECLAIM™ - BIODEGRADABLE

Reclaim™ additive enhances product biodegradability in landfill conditions. Reclaim™ additive attracts microbes, which enables products to breakdown and biodegrade into biogas. The biogas is harnessed by modern smart landfills to create energy, such as electricity, and complete the cycle for a circular economy. Reclaim™ additive is found in our Green Monkey disposables, and select seamless knit styles.

WASTENOT™ - RECYCLED POLYESTER

Designed and sourced with environmental sustainability top of mind. WasteNot™ yarn is made from 100% post-consumer recycled plastic bottles. The materials are certified by Global Recycled Standard and found in our new Homegrown™, Stealth™ and Work Armour brand.

HY+DRY® - WATER RESISTANT

Hy+Dry is a breathable barrier designed with advanced technology, providing ultimate protection from wind and water. Keeping your hands warm, dry and comfortable.

DRYFIBRE™ - WATER RESISTANT

Dryfibre™ is specially treated synthetic leather palm suede that is breathable, water-resistant and oil resistant up to 6 months of heavy duty wear, up to 20 washes.

TITANFIBRE™ - HIGH ABRASION

Titanfibre™ is the highest abrasion resistant synthetic palm suede on the market. Abrasion resistant up to 4000+ cycles.

DURAFIBRE™ - ABRASION RESISTANT

Durafibre™ is a synthetic leather palm suede that is an optimal blend of high abrasion resistance and dexterity. Abrasion resistant up to 1000+ cycles.

INNOVATIVE MATERIALS

DRYHIDE™ - WATER RESISTANT

Dryhide™ is a specially treated leather that is breathable and water-resistant up to 3 hours. Dryhide™ blocks liquid from penetrating the leather and dries soft keeping your hands dry and comfortable.

*Also available in Dryhide™ oil resistant leather

KOOL KNIT™ PERFORMANCE YARN

Kool Knit™ performance yarn wicks away sweat from the skin, is quick drying and exceptionally comfortable to wear.

CUTSHIELD™ - CUT PROTECTION

Cut Shield™ is a cut resistant liner made from a blend of P-aramid, glass or steel and polyester fibres. Available in multiple cut levels.

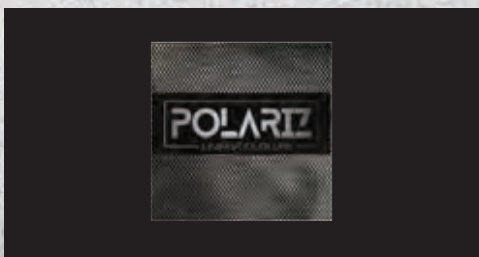

D30® - IMPACT PROTECTION

D30® is a smart material that in its raw state flows freely when moved slowly, but on shock, locks together to absorb and disperse energy, before instantly returning to its flexible states (this means the harder the impact, the greater the shock absorption). D30® provides extreme impact protection and is available in foam (D30® Zero) and TPR.

3M RECYCLED THINSULATE™ - INSULATION

Recycled Thinsulate™ (Type EC) from 3M is made from 78% post consumer recycled plastic water bottles. 1-3 500mL plastic bottle is used in each pair of gloves. Watson Gloves is the first industrial glove manufacturer to use this innovation.

POLARIZ™ - INSULATION

Microfleece lining coated with mini aluminium dots that reflect radiant heat back towards the body to keep you warm.

FULLY DEGRADES IN *Ten* YEARS

ASTM D5526 MODERATE LANDFILL CONDITIONS

5559PF
GREEN MONKEY™

WHEREAS REGULAR NITRILE IS EXPECTED
TO TAKE OVER *200* YEARS TO BIODEGRADE

Watson Gloves Green Monkey™ nitrile disposables will break down in only 8-11 years due to the Reclaim™ additive in the nitrile formulation. Green Monkey™ nitrile gloves have the same performance properties as regular nitrile disposables. Biodegradation only begins when the gloves are discarded in modern landfill conditions (ASTM D5526 – low heat, high pressure, limited oxygen, no light and low moisture). Once the biodegradation process begins, the additive in the Green Monkey™ nitrile disposables will ensure that they do not just break down into smaller plastic pieces, but are actually converted to biogas like other organic materials. ASTM D5526 shows up to 26.5% biodegradation in 390 days.

THE biodegradation PROCESS

- 1 ORGANIC RECLAIM™ ADDITIVE
INTRODUCED INTO NITRILE FORMULA

PERFORMANCE PROPERTIES ARE UNAFFECTED

WasteNot™

WasteNot™ is yarn that is made from 100% recycled plastic PET (polyethylene terephthalate – a form of polyester) bottles. Plastic bottles made from PET are recycled and turned into polyester to make our sustainable gloves. These gloves help the environment without the compromise in quality and performance.

- Premium sandy nitrile palm with reinforced thumb saddle

CUT RESISTANT STANDARD

In January 2016 the American National Standards Institute (ANSI) introduced a new standard called the ANSI/ISEA 105. The goal for updating this standard was to create consistency between ANSI and EN388 methods as well as to account of the recent advances in cut resistant yarns and technologies. Both the new ANSI F2992-15 cut test method and EN ISO 13997 now use the same TDM-100 machines and as a result, their scores now roughly correlate as you can see illustrated in the chart below.

The 2016 revision of the ANSI/ISEA 105 standard is a more expanded level of classification of cut resistance:

- The ANSI ASTM F2992-15 cut test method now features 9 levels of cut resistance: A1-A9 with smaller increments between levels
- Additional levels have also been added to the higher end of the cut resistance scale to account for new cut resistant materials and technologies coming on to the market.

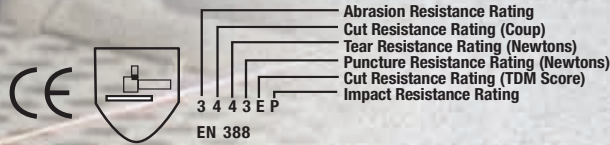

For the EN 388 cut test ratings, both the Coup Test cut score and ISO 13997 rating are required to be represented on the En 388 score

- The new ISO 13997 rating is represented by the letters A-F at the end of the score

EN388 AND ANSI PICTOGRAMS

EN388: 2016 Pictogram:

The EN 388 rating is scored from (A-F)

Abrasion Resistance Rating
 Cut Resistance Rating (Coup)
 Tear Resistance Rating (Newtons)
 Puncture Resistance Rating (Newtons)
 Cut Resistance Rating (TDM Score)
 Impact Resistance Rating

ANSI F2992-15 Icon:

The ANSI ratings is scored from A1-A9

A close-up photograph of a hand wearing a bright green nitrile glove. The hand is holding a white, textured microfiber cloth. The cloth is being held over the headlight and hood area of a dark-colored car. The background is blurred, showing more of the car's body panels. The overall image has a professional, clean aesthetic with a yellow and white geometric overlay in the top right corner.

Find Your Fit

Place your right palm on the size chart with your fingers closely together. Measure the width of your hand by aligning the knuckle of your index finger beside the red line. This is an approximate measurement; sizing can vary slightly from style to style.

CHEMICAL RESISTANT STANDARD

The ISO 374 Protective gloves against dangerous chemicals and micro-organisms have changed substantially and have now been published under the standard ISO EN374-1: 2016 and EN374-5: 2016. The changes are laid out below:

NEW	OLD
EN ISO 374: 2016	EN374: 2003
18 test chemicals	12 test chemicals
Beaker icon is not used	Beaker icon used to illustrate: "waterproof protective gloves with limited protection against chemical dangers"
Gloves are classified as type A, B or C	----
Change of labeling on product: Three pictogram flasks with different number of letters for test chemicals underneath	Pictogram flask only had three chemicals
Introduction of EN 374-4: 2013 for a test of glove performance against chemical degradation	----
Gloves longer than 400mm will require three test specimens from cuff area tested for permeation	----
Microorganisms split - virus is separately tested to En374-5:2016	Microorganism protection based on penetration performance
3 defined AQL levels gloves must meet depending on application requirements of user	AQL of level 2 for all gloves tested against penetration
Requirement length removed	Minimum liquid proof length of 25 cm required
Requirement removed	EN388 mechanical testing required

EN374-1:2016 PICTOGRAMS

As previously stated, the beaker icon is no longer used. Instead there are three flask pictograms as shown below.

TYPE A	TYPE B	TYPE C
EN 374-1:2016 	EN 374-1:2016 	EN 374-1:2016 
JKLMNO	JKL	J

TYPE A: Protective glove with permeation resistance of at least 30 minutes each for at least 6 test chemicals

TYPE B: Protective glove with permeation resistance of at least 30 minutes each for at least 3 test chemicals

TYPE C: Protective glove with permeation resistance of at least 10 minutes each for at least 1 test chemicals

RESISTANCE TO PERMEATION

The number of test chemicals increased from 12 to 18 chemicals which are code lettered M-T as shown below.

CODE LETTER	CHEMICAL	CAS NUMBER	CATEGORY
A	Methanol	67-56-1	Primary alcohol
B	Acetone	67-64-1	Ketone
C	Acetonitrile	75-05-8	Nitrile Compound
D	Dichloromethane	75-09-2	Chlorinated Paraffin
E	Carbon Disulfide	75-15-0	Sulphur <small>Containing Organic Compound</small>
F	Toluene	108-88-3	Aromatic hydrocarbon
G	Diethylamine	109-89-7	Amine
H	Tetrahydrofuran	109-99-9	Heterocyclic & Ethereal
I	Ethyl Acetate	141-78-6	Ester
J	n-Heptane	142-85-5	Saturated hydrocarbon
K	Sodium hydroxide 40%	1310-73-2	Inorganic base
L	Sulfuric Acid 96%	7664-93-9	Inorganic Mineral Acid
M	Nitric Acid 65%	7697-37-2	Inorganic Mineral Acid
N	Acetic Acid 99%	64-19-7	Organic Acid
O	Ammonium Hydroxide 25%	1336-21-6	Organic base
P	Hydrogen Peroxide 30%	7722-84-1	Peroxide
S	Hydrofluoric Acid 40%	7664-39-3	Inorganic Mineral Acid
T	Formaldehyde 37%	50-00-0	Aldehyde

EN374-5:2016 PICTOGRAMS

The EN 374-5:2016 standard specifies performance requirements for gloves that protect users against micro-organisms (bacteria, fungi and/or viruses). Standards for micro-organisms risk was formerly under EN374-2 but now has been developed as a separate EN 374 part as EN374-5:2016. Gloves claiming protection against bacteria, fungi and viruses require additional penetration testing according to ISO 16604:2004 Determination of resistance to protective clothing materials to penetration by blood-borne pathogens. Test method uses Phi-X174 bacteriophage

LEATHER GLOVE COMPONENTS

CUFF TYPES

There are many different types of cuffs to choose from depending on if you need the glove to be taken on/off easily or needing the cuff to be tight to keep out dirt and debris.

Velcro Closure
An Velcro closure is sewn into the cuff area on the back of a glove to keep dirt and debris out.

Safety Cuff
A band of bonded material sewn to a glove as a cuff, sometimes with a slit opening on the side. Safety cuff gloves are designed to be removed quickly if required and offer additional wrist protection.

Gauntlet
A longer cuff to protect the forearms. Standard length is 4.5"-5"

THUMB TYPES

There are many different types of thumb construction to choose from depending on dexterity and comfort level.

Wing Thumb
The angled construction allows good flexibility with no seams on the palm side to obstruct work or cause fatigue.

Straight Thumb
A glove thumb that normally lies straight with the index finger.

Inset Thumb
Thumb set into palm. Gives greater dexterity and comfort

EXTRA FEATURES

Extra features can be added on to the glove to provide additional protection in critical wear areas.

Double Palm
An additional piece of leather is stitched to either the inside or outside of the palm for reinforcement.

Leather Gore
Triangular piece of leather added to gauntlet cuffs to accommodate covering clothing.

Welted Seams
A thin piece of leather sewn into the seam to strengthen it and protect from sparks. Often a welt is used in the seam at the crotch of the thumb and the base of the fingers.

Pulse Protector
Leather reinforcement added to the cuff to protect the inside wrist area.

Out Seam
Stitching and seams are on the outside surface. A comfortable wear for unlined gloves but not often used on work gloves because of vulnerability of seams to abrasion.

Knuckle Bar
A band of leather across the back of a glove, covering the knuckle area for additional protection.

Rubber Components
Rubber components can be added to the glove to provide pinch and impact protection

Reflective Trim
Reflective trim added on the outside of the glove to be seen in low light conditions

Thumb Saddle
Thumb saddle added on the thumb seam to provide additional protection in critical wear areas

GLOVES®
Quality since 1918

**vending machine mock-up is strictly for show, only repackaged gloves available

Onsite S.W.A.T. AUDIT

5 STEP PROCESS

1. ASSESS

- What gloves are currently being used
- What is the injury rate and the cost of these injuries to the employer and employee in lost workdays, efficiency, etc?

2. ONSITE AUDIT

- Assess your operations and examine glove usage throughout the facilities to determine potential opportunities for improvement
- S.W.A.T. members interview management and key employees to determine glove usage, job responsibilities and training

3. EVALUATE & CONSOLIDATE

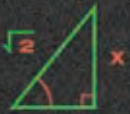

- It is important to properly fit workers with gloves that are correct for the specific jobs, prevent injuries, while maintaining the highest quality in the work place
- Written recommendations on how to reduce injuries, consumption and costs as well as how to consolidate your current glove offering will be presented to you in a professional report

REDUCE
WASTE

REDUCE
CONSUMPTION

4. QUANTIFY

- Quantify the impact of utilizing our sustainable gloves. We start by calculating the carbon footprint for each style of glove. That information used to calculate equivalent energy savings using the EPA WARM model. This information combined with your specific usage provides a custom sustainability impact report that can be used to credit your scope 3 emissions objectives.

5. FOLLOW-UP

- After the S.W.A.T program is implemented, we will continuously follow-up with you to ensure our recommendations are successful and make continuous improvements to the program

GLOVES TO

energy

Quality since 1918

Reclaim™ additive enhances product biodegradability in landfill conditions. Reclaim™ additive attracts microbes, which enables products to breakdown and biodegrade into biogas. The biogas is harnessed by modern smart landfills to create energy such as electricity. (ASTM D5511)

**ASTM D5511 shows up to 48% biodegradation in 609 days*

GLOSSARY

Abrasion Resistance

A glove's ability to protect against abrasions

Allergen Content

General measure of the glove's known allergy issues relating to a type of gloves

Ambidextrous

Gloves that can be worn on both left and right hand

AQL

Acceptable Quality Level Standard

Aramid fibers

The name for the class of heat resistant and extremely strong synthetic fibers. They have excellent resistant to abrasion, organic solvents, are non-conductive, no melting point (degradation starts at 500 degrees Celsius), low flammability.

Barrier Integrity

The glove's ability to provide a protective barrier for a user

Belly Leather

Leather that is strong, resistant and adequately soft for use in gloves

Binding

Narrow material (usually cotton twill) used to finish a glove's cuff, such as on leather drivers

Bleed

Dye transfer from glove fabric to wearer's hands

Chemical Resistance

Refers to a glove's ability to protect a user from a specific substance agent

Clute Cut Style

Seams sewn on back of glove at every finger and straight thumb; palm side is constructed of one continuous piece of material

Cuff

The bottom edge of a glove; comes as a rolled bead cuff as well as gauntlet cuff

Curing

Also known as vulcanization. A process in glove production where the glove compound is strengthened using heat or chemicals to create the glove material

Cut Resistance

A glove's ability to protect the user from being cut

Degradation

A material breakdown in a glove

Dipping

The process in which a glove form is dipped into chemical compound during production to begin shaping the glove from its raw material state

Disposable Gloves

Single use gloves intended to be discarded after a single use

Don

The act of putting a glove on

Elasticity

Refers to a glove's ability to stretch and return to form

Elongation

Measures a glove's ability to stretch and return to form

Flocklined

Flocklined gloves contain an inner liner composed of fibers that are used to improve the comfort of the glove.

Former

Hand-like object that is dipped into the glove compound, and is used to shape the glove compound during production

G or GG

Gauge is a unit of measure a manufacturer uses to define the number of stitches in a given length. For disposables and chemical resistant gloves gauge is the thickness of glove material. The thickness of the glove material is usually measured in mils (1 mil=0.001" gauge).

Glove Memory

Memory refers to a glove's ability to form to a user's hand, providing maximum comfort and less fatigue

HPPE

Acronym for High Performance Polyethylene. It is also the generic name for Dyneema and Spectra. These fibres have a high strength to weight ratio and are very abrasion resistant which is why they are used in cut resistant gloves

Kevlar

See Aramid fibers

Latex

Latex is a natural rubber, extracted from the *Hevea brasiliensis* tree (rubber tree)

Pinhole Test

Glove quality testing method in which the glove is filled with water to detect holes

Puncture Resistance

Refers to a glove's ability to resist holes and tears caused by a pointed instrument

Resistance

A glove's ability to protect the user from a chemical or physical condition or environmental contaminant

Rolled Bead Cuff

A cuff that is formed by rolling material up into a thicker band at the base of the glove

Split Grain

Suede layer cut from the meat side of thicker skins, a consistently durable grade of leather

Strength and Durability

Measures a glove's ability to perform under stress and pressure

Supported Glove

A glove that is created by fabric liner under a protective coating

Tactile Sensitivity

The glove's ability to provide a realistic feel

Tensile Strength

A glove's or fibre's ability to resist tearing when stretched

Texture

A glove finish that allows for improved grip and slip resistance

Unsupported Gloves

Hand forms are dipped directly into the glove compound. The dried film or "skin" is later stripped off the forms, leaving perfectly molded gloves. There is no liner or fabric "supporting" the compound
